DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-17, drawn to a method achieving superantigen mediated expansion of antigen specific T cells, or enhancing cytokine production, comprising administering an antigen and subsequently administering a superantigen, classified in Class 424, subclasses 184.1, 188.1, and 189.1.

II. Claim 18, drawn to a method of treating a human or animal comprising removing diseased tissue followed by administering inactivated diseased tissue and a superantigen, classified in Class 424, subclass 278.1, Class 600, subclass 1, and Class 604, subclass 19.

The inventions are distinct, each from the other because:

2. Inventions I-II are different methods. These inventions comprise different method steps, particularly the initial removal of diseased tissue and inactivation of said tissue in the method of Group II. Therefore the methods are patentably distinct.

3. Because these inventions are distinct for the reasons given above and Groups I-II have acquired a separate status in the art as shown by their different classification and/or the searches are not co-extensive and because the Groups encompass divergent subject matter, restriction for examination purposes as indicated is proper.

4. Should Applicant elect Group I, Applicant is further required under 35 U.S.C. § 121 to elect a **specific** antigen, such as HIV, Hepatitis B or tumor, etc., and list all claims reading thereon. Currently all claims are generic.

5. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The different antigens comprise significantly different immunological properties, i.e., an immune response to HIV is separate and distinct from a tumoricidal response. Therefore, the species are independent and patentable over one another.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gerald Ewoldt whose telephone number is (703) 308-9805. The examiner can normally be reached Monday through Thursday from 7:30 am to 5:30 pm. A message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on (703) 308-3973. Any inquiry of a general nature or relating to the status of this application should be directed to the Technology Center 1600 receptionist whose telephone number is (703) 308-0196.

Papers related to this application may be submitted to Technology Center 1600 by facsimile transmission. Papers should be faxed to Technology Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The CM1 Fax Center telephone number is (703) 305-3014.
